DOSATRON INTERNATIONAL INTRODUCES NEW D14MZ3000 --New Addition to Popular D14 Series Ideal for Hygiene Applications--

CLEARWATER, Fla, May 25, 2010 – [Dosatron International, Inc.](http://www.dosatronusa.com) today introduced the latest addition to the award-winning D14 series, the D14MZ3000 chemical injector. The D14MZ3000 allows for the smallest injection rates of any D14 series injector, making it ideal for the application of peracetic acid (PAA), quaternary ammonium, and other FDA-approved sanitation chemicals that must be applied in small doses.

“The D14MZ3000 is an exciting addition to the Dosatron line,” said Dosatron President Eddy Kelly. “Our goal is to continue to seek new ways to support food processing and other sanitizing applications. The D14MZ3000 is another important step in pursuit of that goal.”

The D14MZ3000 features an injection range of 1:3000 to 1:333, or 0.03% to 0.3%. As with all D14 series models, the D14MZ3000 is manufactured from chemical-resistant polypropylene and features a metal-free piston, which makes it well-suited to the injection of caustic chemicals or chemicals that can erode metal parts. The D14MZ3000, like all Dosatron injectors, is also backed by Dosatron International’s world-class customer service.

The D14MZ3000 is available wherever Dosatron injectors are sold. More information is available via Dosatron International Customer Service at 800-523-8499, or via the Dosatron International website, www.dosatronusa.com.

About Dosatron International
