DOSATRON INTERNATIONAL INTRODUCES NEW D25RE09 --New Wide-Range Injector Ideal for Hygiene, Hydroponics Applications--

CLEARWATER, Fla, September 9, 2009 – [Dosatron International, Inc.](http://www.dosatronusa.com) today introduced the latest addition to the highly-popular D25 series, the [D25RE09 chemical injector](#). The D25RE09 has the widest range of any Dosatron ever built, which makes it ideal for use with sanitizing agents (such as peracetic acid and quaternary ammonia), hydroponics nutrients, and a number of other specialty applications.

“The D25RE09’s flow range and wide injection range really make it unique among Dosatron’s injector offerings,” said Vice President of Industrial Sales Craig Peterson. “Our customers have been requesting an injection solution that will give them the flexibility of a wide injection range. The D25RE09 is the solution they have been looking for.”

The D25RE09 features a flow range of 0.05 to 11 gallons per minute (GPM), and an injection range of 1:1000 to 1:112. As with all Dosatron injectors, the D25RE09 is water-powered and operates on a proportional injection principle, meaning that the injector is unaffected by fluctuations in water pressure and flow.

The D25RE09 is available wherever Dosatron injectors are sold. More information is available via Dosatron International Customer Service at 800-523-8499, or via the Dosatron International website, www.dosatronusa.com.

About Dosatron International

Dosatron International, Inc. is an industry leader in water-powered, proportional chemical injectors. Dosatron products are manufactured according to ISO 9001:2000 and ISO 14001:2004 standards by Dosatron International S.A.S., part of United Technologies Corporation, U.S.A.
