DOSATRON INTERNATIONAL ANNOUNCES SANITATION SOLUTIONS FOR THE FOOD INDUSTRY

CLEARWATER, Fla, November 17, 2008 - [Dosatron International, Inc.](http://www.dosatronusa.com), today announced the availability of several Dosatron chemical injectors capable of injecting peracetic acid, an FDA-approved sanitation product. These field-tested injectors were developed in response to the new FDA regulations regarding disinfection in the food industry, specifically the tomato sector.

“Food safety is a global concern, which is why it was so important to us to get this solution to market for the food industry,” said Eddy Kelly, president of Dosatron International. “Simply installed within the water lines, these injectors will contribute to improvements in food management practices by helping food growers and packagers fight pathogen element outbreaks.”

Dosatron International’s Research and Development team tested several modifications before finding the best solution for the injection of peracetic acid. The new injectors have tested successfully in the field for over three years.

Additional information and injector selection help are available at www.dosatronusa.com or via Dosatron International’s customer service center, which can be reached at 800.523.8499.

About Dosatron International
