DOSATRON INTERNATIONAL EXPANDS TO HYDROPONICS MARKET

CLEARWATER, Fla, December 2, 2008 - [Dosatron International Inc.](http://www.dosatronusa.com) announced today that it is expanding operations to encompass the hydroponics market. This move further strengthens Dosatron's presence in the horticulture market and solidifies its position as the market leader in fertilizer injection systems.

"Dosatron's ability to create custom fertilizer injection systems allows us to serve the needs of this unique market," said Gary Berglund, vice president of Western market sales. "Because we know growers need to inject multiple nutrients, multiple chemical injectors can be installed in either a series or a bypass configuration to address the grower's specific needs."

For hydroponic systems, Dosatron recommends D14-14 GPM and DI1500-11 GPM injectors. Installed in the greenhouses' existing water lines, Dosatron chemical injectors accurately dilute nutrients and inject them directly into the greenhouse watering system.

Since hydroponic growing requires precision, Dosatron's innovative technology is well-suited to this market. Dosatron injectors produce consistent and repeatable results with automatic compensations for flow and pressure changes. The dosage rates are easy to adjust and allow growers the flexibility to make minute adjustments to their mixture at any time.

Additional information and injector selection help are available at www.dosatronusa.com or via Dosatron International's customer service center at 800-523-8499.

About Dosatron International

Dosatron International, Inc. is an industry leader in water-powered, proportional chemical injectors. Dosatron products are manufactured according to ISO 9001:2000 and ISO 14001:2004 standards by Dosatron International S.A.S., part of United Technologies Corporation, U.S.A.
